

SunWater Limited

ACN 131 034 985

Environmental Policy

SunWater is Queensland's major bulk water supplier. In addition to planning, designing and developing our own water infrastructure, we also offer our expertise to a range of industry clients who require water infrastructure facility management and consultancy services.

SunWater is committed to minimising the environmental impact of these activities and preventing pollution for the benefit of current and future generations.

SunWater continues to maintain an Environmental Management System to meet the requirements of AS/NZS ISO 14001. We provide adequate financial, human and educational resources to support good environmental management.

SunWater complies with all relevant environmental management legislation, related standards, codes of practice, stakeholder agreements and other requirements. We set measurable objectives and targets for continual improvement, and report annually on our environmental performance.

SunWater management, staff and subcontractors exercise their environmental duty of care and take responsibility for minimising the environmental impact of their activities.

Through our systems and continual improvement processes, SunWater:

- Places uncompromising emphasis on environmental risk management,
- Responsibly manages any environmental impacts, with due regard to community values and cultural heritage,
- Seeks out, and where practicable, uses products, designs and services which minimise the impact on the environment,
- Actively supports government and community initiatives for good environmental management, and
- Applies research and development to identify other ways of improving our environmental performance.

A handwritten signature in black ink, appearing to read "P. Boettcher", with a long horizontal stroke extending to the right.
